

Progressive Suspension - 444 Series Shocks for Tri-Glide

444 Series Shocks for the Harley-Davidson Tri-Glide are tuned to the weight challenges of the trike and offer many comfort enhancements while utilizing our Frequency Sensing Technology (FST) for its unique ability to dynamically adjust damping as you ride. The result is superior performance no matter the road conditions. A bottom mount threaded preload adjuster allows for fine-tuning with a simple twist of the cap. They are manufactured a half inch (0.5") taller than the OE shocks to improve the OE chassis/suspension setup by offering a better ride and much needed ground clearance. Like most of Progressive's shocks, the 444 Series Shocks for Tri-Glides are available in standard or heavy spring rates and are supported by a lifetime-limited warranty. Contact your local dealer for more information.
